Summary points

- The **global economy is demonstrating resilience**, especially for the US, China, and emerging markets. The **risk of a global recession has diminished**, with emerging markets outperforming advanced economies.
- **Equity markets hit new highs in Q2 2024**, bolstered by strong economic fundamentals and growing investor confidence.
- Persistently high inflation led to **diminished expectations for a significant Fed easing cycle**, with markets now anticipating one to two rate cuts in 2024.
- In June, the **ECB reduced interest rates by 25 basis points** due to continued disinflationary process and weaker-than-expected economic data.
- **China's GDP grew by 5.3%** year-on-year in Q1, exceeding market expectations of 5.0%. Real estate investment in April 2024 declined by 9.8%, highlighting **ongoing challenges in the property market**.
- **Conclusion:** Given the absence of an imminent severe recession, we maintain our **positive bias on risky assets**. However, we are prepared to reduce our equity exposure if interest rates rise again, or economic growth slows. In a low-growth environment, the divergence among companies and sectors increases, **necessitating active management**. We continue to favour credit investments, particularly **focusing on loans and non-cyclical short-term high-yield bonds** offering yields of 7-9%. While we maintain a **positive bias on equities**, we **prefer an absolute return strategy** over a traditional relative value approach in the current market conditions.

1 Regional macroeconomic backdrop

Continued economic resilience

The **global economy is proving resilient**, as shown by IMF's upward revisions to growth forecasts for 2024, particularly in the US, China and emerging markets (EM). This positive development is due to the reduced impact of the recent crises, supported by fiscal programs and moderate impact of monetary policy. The **risk of a global recession has decreased**, with EM faring relatively better than advanced economies. **Inflation remains a concern**, prompting central banks to pursue a vigilant policy. The Fed is expected to be patient, while the ECB moved faster. EM central banks should continue their easing cycles to combat inflation.

However, the **positive momentum is slowing**, and signs of consumer saturation are emerging, which may dampen future growth. **Equity markets reached new highs** in Q2, supported by robust economic fundamentals and investor confidence. Yet, there is **slight saturation in equity markets** due to persistent inflation limiting the Fed's ability to cut interest rates significantly. The bond market reacted to the inflationary pressure and interest rate expectations by pushing up long-term yields significantly. The **yield on 10-year treasuries climbed to 4.7%**. Geopolitical tensions are increasing global risks, impacting inflation and market visibility. Despite solid fundamentals, high valuations and potential volatility warrant caution and a **balanced approach** with alternative investments.

Chart 1: Recession averted, growth accelerates

United States

Over the quarter the **US economy maintained its robust momentum** amid the most aggressive rate hike cycle in decades. Q2 2024 was characterized by widespread optimism fuelled by consistent economic growth expectations and rising equity market valuations supported by strong fundamentals. The **labour market remained strong** and the unemployment rate has remained consistently below 4% for over two years, which has not been the case since the late 1960s. Initial jobless claims remained at historically low levels and the addition of 829,000 jobs in the first quarter underscored the broad-based nature of hiring. **GDP data reflected this optimism**, driven by robust consumer spending, continued growth in business investment and tailwinds from government spending. **Challenges arose with regard to inflation**, which remains stubbornly high. While goods prices reverted to pre-pandemic levels, service prices remained significantly elevated, exerting inflationary pressure.

Market expectations for an extensive Fed easing cycle have weakened. Instead of the seven rate cuts anticipated at the end of 2023, **markets now expect only two cuts** for 2024. The **10-year Treasury yield rose by more than 40 basis points since the beginning of the year**, reflecting the market's adjustments to changing interest rate expectations. Optimism prevailed in equity markets, with **momentum stocks outperforming significantly in Q2**. The Magnificent 7 contributed around 50% of the S&P 500's YTD return. The economy's resilience to forecasts of a slowdown or recession surprised many. However, **economic indicators for May weakened**, with real household spending falling slightly, while corporate profits came in better than expected. Bond yields fell back from their year-to-date highs as investors digested dovish Fed signals and weaker-than-expected economic data.

Europe

The second quarter of 2024 in the eurozone was characterized by a **complex interplay of economic factors, monetary policy adjustments and geopolitical developments** that shaped the investment landscape in the region. Economic indicators painted a nuanced picture of a slight recovery in the eurozone. While **preliminary GDP estimates signalled moderate growth** of 0.3% quarter-on-quarter, concerns about the sustainability of economic growth remained considering ongoing disinflationary process. The composite Purchasing Managers' Index (PMI) rose to a 12-month high, indicating an improvement in economic activity, particularly in the services sector. However, challenges remain, and the manufacturing sector is showing signs of sluggishness in some areas. **Inflation in the eurozone remained elevated**, with headline and core inflation accelerating slightly to 2.6% and 2.9% respectively in May.

The European Central Bank (ECB) **cut interest rates by 25 basis points in June** in response to ongoing disinflationary process and weaker than expected economic data. Market reactions to the ECB's monetary policy adjustments varied. Bond yields in the eurozone fluctuated, reflecting changing interest rate and inflation expectations. **Credit default swaps on government bonds rose to multi-week highs** following the announcement of the rate cut, reflecting investor concerns about the region's economic outlook. Geopolitical developments, including the European elections, contributed to market uncertainty. The **EU elections were largely in line with pre-election expectations**, with far-right parties making notable gains. Nevertheless, the **current majority coalition has sufficient support in parliament**. President Macron's decision to call an early general election in France following the strong performance of Ms. Le Pen's RN party was the most unexpected result.

China and emerging markets (EM)

China's economy demonstrated resilient growth, with GDP rising 5.3% year-on-year (y-o-y) in Q1 2024, up from 5.2% in Q4 2023, exceeding market expectations (5.0%). This growth was primarily driven by robust industrial production, increased manufacturing investment, and a rebound in exports. The Lunar New Year festival also contributed to this economic uplift. **Consumption patterns showed divergence**; service consumption surged by 10% in Q1, while consumer goods consumption remained below pre-pandemic levels. **Manufacturing and infrastructure investments demonstrated strong momentum**, growing by 9.9% and 8.8% respectively, with further growth expected due to ongoing equipment renewal and accelerated government bond issuance. **Export growth returned to positive territory**, driven by global manufacturing recovery, and strengthened regional trade collaborations. **The manufacturing PMI indicated a recovery in business prospects**, remaining in the expansion zone at 51.7. Foreign direct investment in China dropped 28.2% y-o-y from January to May 2024, a record decline.

Inflation remained low, with the annual rate steady at 0.3% in May 2024, falling short of market forecasts and reflecting a modest recovery in domestic demand. The **property market faced challenges**, with real estate investment declining by 9.8% y-o-y in April 2024. Despite expectations of a pickup due to a low base effect and eased liquidity for developers, long-term recovery will require sustained policy support. The **People's Bank of China maintained key lending rates in May**, with the 1-year loan prime rate at 3.45% and the 5-year rate at 3.95%, following a cut earlier in the year.

Chart 3: Decoupling of Euro Stoxx 50 and S&P 500 in June '24

Source: Bloomberg Finance L.P., Alpinum Investment Management

These rates, at historic lows, reflect Beijing's efforts to spur economic recovery amid mixed activity data, including sustained industrial output growth, the lowest jobless rate in five months, and weak retail turnover.

Investment conclusions

The **global economy proves resilient** despite higher capital costs and geopolitical tensions. **Inflation remains high** compared to pre-COVID levels, with a mix of disinflationary and cyclical inflationary pressures. The **US is experiencing low growth, while Europe is facing stagnation and China is aiming for a 5% GDP target**. Despite a rapid normalization of interest rates, there has been **no recession and companies have adjusted** and stabilized their profit margins. **Equity valuations are high**, but there are opportunities outside the US. The **interest rate tightening cycle is complete**, although the new inflation poses a risk of significant cuts. **Credit exposure remains constructive**.

Chart 5: Credit yields trump earnings yield on equities

Bonds: Monetary policy tightening has concluded globally, but banks' credit tightening measures continue to challenge corporate financing. Default rates have risen but have not spiked, making **selective credit attractive**. Our current tactical stance is **neutral on duration**, favouring US Treasuries, and **overweight in credit**, particularly in Scandinavian short-term HY, European loans and structured credit.

Equities: Equity valuations are deemed fair, though modest growth prospects limit the upside potential for large US equities due to **elevated PE multiples**.

A blended investment style is advised, along with a **positive outlook for US Treasuries** and **short-term high-yield loans**, and a **mildly positive outlook for equities**. In the credit market, we anticipate a **modest increase in default rates**, leading to slightly elevated levels. Finally, we consider **current credit spreads to be reasonably valued**.

5 Scenario overview 6 months

Base case 65%	Investment conclusions
<ul style="list-style-type: none"> ▪ US: Minimal positive real GDP growth (1-2%) with solid ~4% nominal growth, which keeps the economy rolling. Some inflation forces still weigh on consumer demand, but companies can defend their profit margins. High interest rates and geopolitical tensions remain the key concern for the economic outlook and constrain private investments. Slightly rising house prices and continued wage increases > inflation rate keep private consumption up. Government spending (i.e., infrastructure, old/new energy, defence) remains the other source of growth. ▪ Eurozone: Stagflation, zero growth environment. Slow growth dynamic caused by elevated inflation, higher rates, impact of war. But continuing fiscal impulse, solidarity payments, defence spending and lower prospective interest rates are supportive. ▪ China: GDP grows towards 5% thanks to government support incl. various credit impulse measures. ▪ Oil: OPEC+ targets elevated energy prices, while latest marginal economic expansion is also pro-cyclical. 	<ul style="list-style-type: none"> ▪ Equities: Equities are confronted with profit margin pressure risk, limited economic growth ahead, high rates and the looming risk of a vicious wage-price spiral. Equities lack a sustained upside potential with a S&P forward P/E multiple of ~20. We recommend a balanced approach in terms of equity style ▪ Interest rates: Neutral bias on rate exposure, but some new cyclical inflation is building. (US) duration exposure serves as a valuable diversifier and tail hedge in case of an evolving (severe) recession. ▪ Credit: Credit spreads are fairly priced and remain selectively attractive, despite a higher floor of corporate default rates (~3%). We prefer loans, short-term HY, senior exposure in structured credit and on a selective basis, also some Emerging Debt and low-duration IG bonds. ▪ Commodities/FX: Rates advantage keeps USD on the bid-side in the short-term; energy gets support from OPEC/limited supply; structural higher inflation supports the commodities bloc.
Bull case 20%	Investment conclusions
<ul style="list-style-type: none"> ▪ US: GDP growth rate of 2-3% (4-6% nominal). Fed succeeds and inflation decelerates. Supply chain issues solved and consumer spending remains robust, supported by high savings & wage increases. Energy prices don't overshoot, firms increase CapEx. Economy transitions further into a "new normal". ▪ Europe: Mild growth acceleration & avoidance of recession; peripherals backed by continued fiscal/monetary policy support; standing together spirit holds; significantly more defence/green energy spending. ▪ China/EM: Chinese regulatory craze fades further, consumption revives and credit easing measures gain traction. No significant further escalation with the West. Supply chain issues largely solved. 	<ul style="list-style-type: none"> ▪ Equities: Corporates have been fast in adapting to lower growth prospects via cost cuttings to maintain earnings strength. Firms favour capital vs. expensive labour to increase (keep) profitability. If a de-escalation in the Russia-Ukraine conflict can be reached, markets will experience an upwards lift. However, inflation pressure and high rates keep valuations largely in check. Further upside potential. ▪ Interest rates: Long-term rates move slightly up, bear flattening curve; inflation pressure persists. ▪ Credit: Corporate default rates hold steady at long-term average level. Credit in general and short-term HY bonds/loans in particular benefit the most. ▪ Commodities/FX: Bid for cyclical commodities/metals. EUR and selective EM FX rates recover.
Bear case 15%	Investment conclusions
<ul style="list-style-type: none"> ▪ US: Mild recession with the risk of lasting longer, but still positive nominal GDP growth. Moderate unemployment rate combined with resilient inflation kicks off slight wage-price spiral. No Fed rate cuts. ▪ Europe: Moderate recession with a risk of lasting economic weakness due to war/geopolitics. No sustained recovery of international tourism. Peripherals suffer from high rates and Germany from high (energy/wages) input costs. ▪ China/EM: Chinese regulators fail to ease credit and regulatory measures enough, leading to <5% GDP growth in 2024 and disappointing exports. Emerging markets (ex-commodity exporters) suffer as global trade is held back. EM FX decline does not stop. 	<ul style="list-style-type: none"> ▪ Equities: Equities fall and give back 2024-YTD gains. Highly priced US equities and cyclicals will lead the correction, followed by Europe. ▪ Interest rates: Long-term rates drop (further yield curve inversion), but limited potential apart from US rates. Support for high-quality assets (Treasuries, A/AA bonds, agency bonds). Cash is king! ▪ Credit: Corporate default rates climb and approach the higher end of long-term average levels. Severe default cycle is avoided but credit markets suffer. Favour short-dated high-quality bonds and cash. ▪ Commodities/FX: Negative for cyclical commodity prices. USD, CHF, and JPY act as safe haven again.

Tail risks

- Liquidity shock due to external event/bank failure.
 - An Italian sovereign debt crisis, EUR break up.
 - Military conflict in the South China Sea.
 - Pandemic crisis re-emerges/new virus variants.
 - Nuclear escalation resulting in World War III.
 - Emerging market meltdown similar to 1998.
-

6 **Asset class assessment**

Equities	Comment
<ul style="list-style-type: none"> ▪ With the prospect of a “muddling through” US economic scenario, corporates’ profit margins are more sustained than feared and cost cutting programs during 2022 & 2023 proved successful. ▪ Positive wealth effect driven by rising equity markets, higher wages and stabilizing house prices provide support to US consumption and corporates’ revenues consequently. ▪ A negative factor for equities remains the “competition” of other asset classes, namely the attractive short-term interest rate levels of US Treasuries >5% or HY bonds yielding close to 8% p.a. ▪ Non-US equities trade with more attractive valuations and are poised to outperform if a de-escalation in the Ukraine conflict emerges and/or if the USD loses strength. 	<ul style="list-style-type: none"> ▪ Current elevated S&P P/E ratio of ~20 translates into an earnings yield of only 5%. If negative earnings surprises come up, US equities are very vulnerable. After strong YTD-performance, a technical correction of 4-6% is in the cards. ▪ Market consensus estimates that US earnings will grow around 10% both in 2024 & 2025, which poses a risk for disappointment. ▪ Military conflicts & geopolitics leads to more structural inflation pressure (less globalization/productivity, less efficient/safe supply chains, more protectionism, more tariffs & fiscal spending). ▪ US equities incorporate advanced valuations vs. RoW, but economy is also more resilient, less impacted by Ukraine conflict & supported by big tech earnings. A certain valuation premium is justified.
Credit / Fixed Income	Comment
<ul style="list-style-type: none"> ▪ Rates: We have entered a new interest rate regime with the yield spike in 2022/23. The outlook for duration as an asset class is now appealing. Peak rates in Fed funds are reached, however, inflation is not yet fully tamed. We have a neutral positioning in duration but are willing to increase the exposure tactically. Now, duration acts as a valuable portfolio diversifier again. ▪ IG: We hold minimal US investment grade bonds and only selective European IG bonds. A limited number of EM/Asia IG bonds look attractive, but we hold only very little exposure. ▪ High Yield: Loans and high yield bonds offer fair relative and attractive absolute yields. Overall, we favour selective US short-term non-cyclical bonds, European loans & senior/mezzanine CLO tranches. ▪ Emerging Debt: Selective opportunities exist, but the risks are still elevated with the on-going negative fund flows. When the USD strength starts to fade, selective local currency bonds will gain our attention. 	<ul style="list-style-type: none"> ▪ With the stress in the banking system in H1 2023 and the provoked regulatory actions, borrowing costs are still elevated. ▪ The narrative for short-term rates is: Higher for longer, but peak level is reached. ▪ The ECB will continue its path of rate cuts, whereas the US Fed will push out its first rate cut into autumn as some cyclical inflationary forces have been building. ▪ Credit spreads appear a bit expensively priced. Current spread levels compensate for a low economic growth environment, but not for a recession. Corporate default rates have peaked and will remain slightly elevated at ~3%. ▪ We like structured credit, such as selective US agency & non-agency RMBS or European CLOs. ▪ Consider harvesting the illiquidity premium from direct loans (corporate/mortgage-backed loans). ▪ We also identify attractive yield in new alternatives, but selection and a proper liquidity management are paramount.
Alternatives	Comment
<ul style="list-style-type: none"> ▪ Credit long-short strategies identify plenty of relative value trades, both long and short. ▪ Equity long-short strategies benefit from high volatility and elevated performance dispersion. ▪ Alternative lending as an asset class is in the spotlight as yields have never been higher. 	<ul style="list-style-type: none"> ▪ Active managers benefit from the current fragile economic environment. Moreover, innovative disruption leads to more price dispersion among single securities, industries, etc. ▪ Global macro managers benefit from sharp market movements in either direction (i.e., rates/FX).
Real assets	Comment
<ul style="list-style-type: none"> ▪ Commodities benefit partly from de-globalization (protective measures), supply-side constraints and the recent cyclical economic uptick. ▪ Gold benefits when real and/or nominal interest rates fall and vice versa; central bank diversification trend & cyclical forces are a tailwind for gold. 	<ul style="list-style-type: none"> ▪ Elevated inflation is beneficial for commodity prices, but a soft economy is negative. Chinese growth hopes have not yet materialized as an additional support level for commodities. ▪ Supply-side disruption has faded on a global scale.

Disclaimer

This document or email and any attachments transmitted with it (hereinafter altogether document) are confidential and intended solely for the use of the recipient. If you have received this document in error, please inform us immediately and delete it.

This document has been prepared by Marcuard Heritage AG, its subsidiaries or affiliates (hereinafter altogether Marcuard Heritage) and is for your information purpose only. It is not intended to be investment advice or research, a sales prospectus, an offer or a solicitation to an offer to enter any investment activity.

This document is of generic information and does not consider specific investment objectives, financial situation or particular needs of any recipient. It should therefore not be regarded by recipients as a substitute for the exercise of their own judgment. The explanations contained in this document are based on general economic principles and assumptions. Different assumptions or views could lead to materially different results. Any investment entails a certain degree of investment risks. The attention is hereby drawn to such risks (which can be substantial). Changes in foreign exchange rates may have a negative impact on the price, value or income of an investment. The market in specific securities may be illiquid and therefore valuing the investment and identifying the risks may be difficult. Some investments may be subject to sudden, and large drawdown in value and may return less than the invested amount. Past performance is no guarantee of future results.

Some links in this document may lead to access websites of third-party providers. Such links are only provided for your benefit and information. Marcuard Heritage does not review or monitor the information on any third-party website. Although Marcuard Heritage endeavours to ensure that the information is accurate, Marcuard Heritage does not represent or warrant the accuracy, validity or completeness of the information. Accordingly, Marcuard Heritage assumes no responsibility for the accuracy, completeness or legality of the content of such websites or any offers and services contained therein. Accessing third party website is at your own risk.

Marcuard Heritage does not provide any tax or legal advice and makes no representations as to the tax treatment of assets or the investment returns thereon, both in general or with reference to specific recipient's circumstances and needs. Recipients should obtain independent legal and tax advice on the implications in the respective jurisdiction and should consult their personal advisor in order to ensure that the respective investment product and services are suitable to them.

This document is not intended for distribution into the US or to US persons or in jurisdictions where its distribution by Marcuard Heritage would be restricted. Marcuard Heritage prohibits the re-distribution of it in whole or in part without prior written agreement of Marcuard Heritage. Marcuard Heritage, its directors or employees do not accept any liability whatsoever for the actions of third parties in this respect or any liability for any loss or damage arising out of the use of this document.

All information is subject to copyright with all rights reserved. Any communication with Marcuard Heritage may be recorded.
